Bayesian inference using the structured coalescent

Migrate-n version 5.0.4(git:Distribution-version) [May-09-2022]

Program started at Tue May 23 22:37:57 2023

Program finished at Tue May 23 22:38:00 2023 [Runtime:0000:00:00:03]

Options

Inheritance multipliers in use for Thetas:

All loci use an inheritance multiplier of 1.0

Random number seed:

(with internal timer)

2641673473

Start parameters:

Theta values were generated

Using a percent value of the prior

M values were generated

Using a percent value of the prior

Connection matrix:

m = average (average over a group of Thetas or M,

s = symmetric migration M, S = symmetric 4Nm,

0 = zero, and not estimated,

* = migration free to vary, Thetas are on diagonal

d = row population split off column population, D = split and then migration

Population	1	2	2	2	2
1 Africa	*	*	*	*	*
2 China	*	*	*	*	*
2 Brazil	*	*	*	*	*
2 Mexico_and_neig	*	*	*	*	*
2 Puerto_Rico	*	*	*	*	*

Order of parameters:

1	Θ_1	<displayed>
2	Θ_2	<displayed>
3	$M_{2 \rightarrow 1}$	<displayed>

4 M $1 \rightarrow 2$ <displayed>

Mutation rate among loci:

Mutation rate is constant

Analysis strategy:

Bayesian inference

-Population size estimation:

Exponential Distribution

-Geneflow estimation:

Exponential Distribution

Proposal distributions for parameter

Parameter	Proposal
Theta	Metropolis sampling
M	Metropolis sampling
Divergence	Metropolis sampling
Divergence Spread	Metropolis sampling
Genealogy	Metropolis-Hastings

Prior distribution for parameter

Parameter	Prior	Minimum	Mean	Maximum	Delta	Bins	UpdateFreq
1 Theta **	Uniform	0.000000	0.050	0.100	0.010	1500	0.12500
2 Theta **	Uniform	0.000000	0.050	0.100	0.010	1500	0.12500
3 M **	Uniform	0.000000	500.0	1000.	100.0	1500	0.12500
4 M **	Uniform	0.000000	500.0	1000.	100.0	1500	0.12500

[* * means priors were set globally]

Markov chain settings:

Long chain

Number of chains	1
Recorded steps [a]	1000
Increment (record every x step [b])	10
Number of concurrent chains (replicates) [c]	1
Visited (sampled) parameter values [a*b*c]	10000
Number of discard trees per chain (burn-in)	100

Multiple Markov chains:

Static heating scheme

4 chains with temperatures
1000000.00 3.00 1.50 1.00
Swapping interval is 1

Print options:

Data file: infile
parmfile
Haplotyping is turned on: NO
Output file: outfile
Posterior distribution raw histogram file: bayesfile
Raw data from the MCMC run: bayesallfile.gz

Print data:

No

Print genealogies [only some for some data type]:

None

Data summary

Data file: infile
 Datatype: Haplotype data
 Number of loci: 1

Mutationmodel:

Locus Sublocus Mutationmodel Mutationmodel parameters

1 1 Jukes-Cantor [Basefreq: =0.25]

Sites per locus

Locus Sites

1 10269

Site rate variation and probabilities:

Locus Sublocus Region type Rate of change Probability Patch size

1	1	1	1.000	1.000	1.000	
Population				Locus		Gene copies data (missing)
1 Africa				1		5
2 China				1		12
2 Brazil				1		13
2 Mexico_and_neighbors				1		8
2 Puerto_Rico				1		2
Total of all populations				1		40 (0)

Bayesian Analysis: Posterior distribution table

Locus	Parameter	2.5%	25.0%	Mode	75.0%	97.5%	Median	Mean
1	Θ_1	0.00727	0.01273	0.02277	0.03080	0.07220	0.03310	0.03906
1	Θ_2	0.01140	0.01567	0.01870	0.02140	0.02707	0.01890	0.01913
1	$M_{2 \rightarrow 1}$	31.333	75.333	102.333	169.333	302.000	144.333	153.897
1	$M_{1 \rightarrow 2}$	6.000	35.333	54.333	74.667	118.000	59.000	60.394

Bayesian Analysis: Posterior distribution for locus 1

Log-Probability of the data given the model (marginal likelihood)

Use this value for Bayes factor calculations:

$BF = \text{Exp}[\ln(\text{Prob}(D \mid \text{thisModel}) - \ln(\text{Prob}(D \mid \text{otherModel}))]$

or as $LBF = 2 (\ln(\text{Prob}(D \mid \text{thisModel}) - \ln(\text{Prob}(D \mid \text{otherModel})))$

shows the support for thisModel]

Locus	TI(1a)	BTI(1b)	HS(3)
1	-31813.07	-26644.20	-27521.75

(1a) TI: Thermodynamic integration: $\log(\text{Prob}(D|\text{Model}))$: Good approximation with many temperatures

(1b) BTI: Bezier-approximated Thermodynamic integration: when using few temperatures USE THIS!

(2) SS: Steppingstone Sampling (Xie et al 2011)

(3) HS: Harmonic mean approximation: Overestimates the marginal likelihood, poor variance

Acceptance ratios for all parameters and the genealogies

Parameter	Accepted changes	Ratio
Θ_1	1105/1194	0.92546
Θ_2	809/1248	0.64824
$M_{2 \rightarrow 1}$	898/1202	0.74709
$M_{1 \rightarrow 2}$	745/1293	0.57618
Genealogies	187/5063	0.03693

MCMC-Autocorrelation and Effective MCMC Sample Size

Parameter	Autocorrelation	Effective Sample Size
Θ_1	0.98743	6.32
Θ_2	0.82585	95.28
$M_{2 \rightarrow 1}$	0.93070	35.86
$M_{1 \rightarrow 2}$	0.74366	146.86
Genealogies	0.98743	6.32

Average temperatures during the run

Chain	Temperatures
-------	--------------

1	1.00000
2	1.50000
3	3.00000
4	1000000.00000

Adaptive heating often fails, if the average temperatures are very close together try to rerun using static heating! If you want to compare models using marginal likelihoods then you MUST use static heating

Potential Problems

This section reports potential problems with your run, but such reporting is often not very accurate. With many parameters in a multilocus analysis, it is very common that some parameters for some loci will not be very informative, triggering suggestions (for example to increase the prior range) that are not sensible. This suggestion tool will improve with time, therefore do not blindly follow its suggestions. If some parameters are flagged, inspect the tables carefully and judge whether an action is required. For example, if you run a Bayesian inference with sequence data, for macroscopic species there is rarely the need to increase the prior for Theta beyond 0.1; but if you use microsatellites it is rather common that your prior distribution for Theta should have a range from 0.0 to 100 or more. With many populations (>3) it is also very common that some migration routes are estimated poorly because the data contains little or no information for that route. Increasing the range will not help in such situations, reducing number of parameters may help in such situations.

Param 1: Effective sample size of run seems too short!

Genealogies 5: Effective sample size of run seems too short!
